SUMMARY

Full-stack developer with 1.5 years building and shipping production web applications and AI agents — solo, end to end, from database schema to live deployment. One live product in real use in Tirupati. Comfortable across the stack and quick to pick up new tools when a project needs them.

EXPERIENCE

Software Development Engineer

Mar 2026 – May 2026

GetBindu

Remote

- One of two engineers. Built the Bindu Mail Agent — an HR email triage system (Python, Agno, AgentMail) that parses job applications, scores completeness against configurable per-inbox rules, auto-generates responses, and escalates stalled applications to a human via Slack. Has processed real applications in production.
- Fixed PostgreSQL storage bugs in the core Bindu platform; contributed a documentation update to the AG2 (AutoGen) open-source repository.
- Acted as Git maintainer: handled PR reviews, branch management, and wrote developer documentation with Mintlify.

Application Developer Intern

Feb 2025 – Jun 2025

Rooman Technologies — Skill India Program

Kothakota, AP

- Completed a structured MERN-stack certification program with daily practical tasks covering frontend, backend, and database fundamentals.
- Built a job finder application as the capstone: user auth, job posting, application submission, and in-app notification flow — deployed and working end to end.

PROJECTS

Jyo — Community Food Sharing | *React, TypeScript, Hono, PostgreSQL, Drizzle ORM, Supabase* | [GitHub](#) | [Live](#)

- Full-stack food-sharing platform for Tirupati — live and in real use. Core trust model: exact pickup location hidden until request is approved; pickers submit a selfie before the poster commits, avoiding ID verification while maintaining safety.
- GPS feed with haversine distance filtering (20km radius), 5-state post lifecycle with cron-driven expiry, JWT auth in httpOnly cookies, email verification via Resend, and in-app notifications via Supabase listeners.

Repo Pilot — GitHub Automation | *TypeScript, React, Hono, PostgreSQL, Drizzle ORM, Gemini* | [GitHub](#) | [Live](#)

- Event-driven bot connecting via a GitHub App (JWT-signed installation tokens) to react to issues, PRs, and pushes — running user-defined rules to label, comment, and alert Slack, with optional AI triage via Gemini.
- Webhooks are HMAC signature-verified and idempotent against GitHub's at-least-once delivery (unique constraint on delivery ID); all outbound calls use retry-with-backoff with action-level status logging.

Feedback Intelligence | *TypeScript, React, Hono, PostgreSQL, Groq* | [GitHub](#) | [Live](#)

- Feedback platform that runs submissions through a Groq LLM pipeline to extract themes, cluster related entries, and surface suggested solutions on a dashboard. Per-user data isolation, cookie-based JWT auth with SameSite + Secure flags for CSRF mitigation.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL

Frontend: React, Next.js, Tailwind CSS, Shadcn/ui, Framer Motion

Backend: Node.js, Hono, Express.js, REST API Design, JWT Auth

AI & Agents: Agno, LangChain, Groq, Claude API, OpenAI, GitHub Apps API

Databases & ORM: PostgreSQL, MongoDB, Drizzle ORM, Prisma ORM

Tools & DevOps: Docker, Git, Vercel, Render, Cloudflare, Postman, Mintlify

EDUCATION

B.Tech in Computer Science

Graduated April 2026

SVCE, Tirupati, AP

GPA: 8.6

Diploma in Computer Science

May 2023

Govt. Polytechnic, Kadapa, AP

GPA: 8.0
